

Announcement

Pavement Repairs

The 2018 Pavement Repair Project will begin on October 1. Contract work will begin with cutting the asphalt at all work locations and is anticipated to take two days.

The Contractor will then systematically begin repairing each location by removing the subgrade and replacing the failed system. New asphalt is not planned to be placed until all subgrade repairs have been made, which is currently scheduled for October 22-24.

Given the weather dependent nature of paving, these dates may be moved to accommodate the weather. Low volume roads will likely be closed at the work site requiring motorists to use minor detour routes. The City asks all motorists traveling near work sites to be mindful of the construction activities and traffic control devices.
